

Supplementary Information

AI Usage Disclosure

Throughout the project, I used ChatGPT as a helper tool to help with coding and to support my understanding of ML concepts. Specifically, I used AI to:

- Assist in writing Python code
- Help debug errors and refine preprocessing and modeling workflow
- Explain areas that I didn't fully grasp (such as r^2)

All of the codes and outputs were reviewed, tested, modified by me and I did extensive sanity checks on each of the AI's outputs to ensure accuracy. My report reflects my own understanding based on the assistance provided by the AI tool
